

Solutii AGC pentru control solar complet

Dragos Matei
15 mai 2018
Bucuresti

AGC Group – prezenta in mai multe sectoare de activitate

1) Sticla

2) Electronics & Display

3) Chemicals

AGC Group – prezenta pe 4 continente

- 
- ▶ cifra de afaceri: 11,6 miliarde euro
 - ▶ 51,000 angajati
 - ▶ mai mult de 200 companii
 - ▶ Sediul central in Tokyo
 - ▶ cotata pe bursa, Tokyo Stock Exchange
 - ▶ lider mondial in productia de sticla

Note: 2017 figures

GLASS OPERATIONS WORLDWIDE

Building & Ind

The Americas

- ▶ 5 float plants
- ▶ Fab. network (2)

Automotive

- ▶ 4 automotive plants

- ▶ ARG network

- ▶ R&D Centre

- ▶ 3,900 employees

Europe

- ▶ 18 float plants*

- ▶ Fab. network (48)

- ▶ 6 automotive plants

- ▶ ARG network

- ▶ R&D Centre

- ▶ 16,000 employees

Asia / Japan

- ▶ 14 float plants

- ▶ Fab. network (27)

- ▶ 12 automotive plants

- ▶ ARG network

- ▶ R&D Centre

- ▶ 12,300 employees

(*) including 2 float furnaces on cold hold.

O gama extinsa de produse , neegalata de nimeni, creata pentru a satisface nevoiele si dorintele utilizatorilor

- ▶ Float
- ▶ sticla pentru arhitectura
 - ▶ cu pelicula
 - ▶ laminata
- ▶ sticla decorativa si pentru design interior
 - ▶ ornament
 - ▶ oglinzi
 - ▶ sticla vopsita
 - ▶ rezistenta la foc
- ▶ sticla pentru captarea energiei solare
- ▶ sticla pentru industrii specializate
 - ▶ sticla pentru trenuri, tramvaie,vapoare, pentru aparate electrocasnice
 - ▶ pentru aplicatii high-tech, etc.

© AGC Glass Europe

februarie 2013, BAU, Munich: sticla cu pelicula, securizata ,serigrafiata si stratificata, 14 m lungime

2018 AGC Boussois
(France)
livreaza sticla
Planibel Clearvision
16 m lungime

Solar control

As their name suggests, solar control glass helps control the amount of solar energy that enters a building. Solar control glass saves money by reducing the amount of energy used by heating and air conditioning systems and boosts comfort levels inside the building by controlling indoor temperatures and light levels. Solar control performance, as expressed by the glass' solar factor, will vary according to:

- the quantity of heat absorbed by the glass
- and the quantity of reflected heat.

Product range:

- coloured Planibel body-tinted glass;
- Stopsol and Sunergy pyrolytic hard-coated glass;
- Stopray vacuum coated glass;
- Artlite silkscreen-printed glass.

Introducere- efectul de sera

efectul de sera = supraincalzirea interioarelor

Ce este controlul solar?

- ▶ control solar = limitarea cantitatii de caldura care trece prin sticla si duce la efectul de sera. Se traduce prin SF scazut ($SF=20—45\%$)
- ▶ solutii complexe, incepand cu sticla colorata in masa, sticla reflexiva , sticla selectiva

importanta controlului solar

Yearly sum of global irradiation received by optimally-inclined PV modules
Romania

EUROPEAN COMMISSION
DIRECTORATE-GENERAL
Joint Research Centre

importanta controlului solar

De ce sticla cu control solar?

- ▶ costul energiei este in crestere
- ▶ rezervele de energie sunt in scadere
- ▶ In prezent, locuintele situate in cladiri vechi consuma cu circa 40% mai multa energie decat media din UE.
- ▶ LEGISLATIA ROMANA impune **certificarea energetica** (legea 372/2005, modificata si completata in 2008, prevede obligativitatea intocmirii **CERTIFICATULUI DE PERFORMANCE ENERGETICA A CLADIRII**)

CERTIFICAT DE PERFORMANTA ENERGETICA A CLADIRII

- ▶ intocmit la finalizarea cladirilor noi
- ▶ prezentat la orice tranzactie
- ▶ se analizeaza 5 COSTURI :
 - ▶ incalzire → lowE
 - ▶ apa calda de consum --
 - ▶ climatizare → Factor solar
 - ▶ ventilare mecanica--
 - ▶ iluminat artificial → LT

Certificat de performanță energetică

ANEXA Nr. 1 la normele metodologice

Cod localitate poștal Nr. înregistrare la Consiliul Local Data înregistrării
 z z l l a
 5 0 7 0 1 0 - 0 0 8 2 1 8 - 0 2 0 2 0 7

Performanța energetică a clădirii		Notare energetică: 59,2
Sistemul de certificare: Metodologia de calcul al Performanței Energetice a Clădirilor elaborată în aplicarea Legii 372/2005	Clădirea certificată	Clădirea de referință
Eficiență energetică ridicată		B
		E
Eficiență energetică scăzută		
Consum anual specific de energie [kWh/m²an]	430	180
Indice de emisii echivalent CO ₂ [kgCO ₂ /m²an]	85	40
Consum anual specific de energie [kWh/m²an] pentru:	Clasă energetică	
	Clădirea certificată	Clădirea de referință
Încălzire:	240	D B
Apă caldă de consum:	110	E C
Climatizare:	-	- -
Ventilare mecanică:	-	- -
Iluminat artificial:	80	E C
Consum anual specific de energie din surse regenerabile [kWh/m²an]:	0	

Date privind clădirea certificată:

Adresa clădirii: Aria utilă: m²
 Categorie clădirii: Aria construită desfășurată: m²
 Regim de înălțime: Volumul interior al clădirii: m³
 Anul construirii: Scopul elaborării certificatului energetic:

Programul de calcul utilizat: _____, versiunea: _____

Date privind identificarea auditorului energetic pentru clădiri:

Specialitatea Numele și prenumele (c, i, ci)	Şeria și Nr. certificat de atestare	Nr. și data înregistrării certificatului în registrul auditorului	Semnătura și stampilă auditorului
--	-------------------------------------	---	-----------------------------------

Clasificarea energetică a clădirii este făcută funcție de consumul total de energie al clădirii, estimat prin analiză termică și energetică a construcției și instalațiilor aferente.

Notarea energetică a clădirii ține seama de penalizările datorate utilizării nerationale a energiei.

Perioada de valabilitate a prezentului Certificat Energetic este de 10 ani de la data înregistrării acestuia

DATE PRIVIND EVALUAREA PERFORMANȚEI ENERGETICE A CLĂDIRII

□ Grile de clasificare energetică a clădirii funcție de consumul de căldură anual specific:

ÎNCĂLZIRE:

APĂ CALDĂ DE CONSUM:

ILUMINAT:

TOTAL: ÎNCĂLZIRE, APĂ CALDĂ DE CONSUM, ILUMINAT

CLIMATIZARE:

VENTILARE MECANICĂ:

□ Performanța energetică a clădirii de referință:

Consum anual specific de energie [kWh/m²an]	Notare energetică
pentru:	
Încălzire:	85
Apă caldă de consum:	45
Climatizare:	-
Ventilare mecanică:	-
Iluminat:	50
	94,4

□ Penalizări acordate clădirii certificate și motivarea acestora:

P₀ = 1,45 – după cum urmează.

- Subsol uscat, dar fără posibilitate de acces la instalatia p₁ = 1,01
- Ușa de intrare în clădire nu este prevăzută cu sistem automat de închidere și este lăsată frecvent deschisă în perioada de neutilizare p₂ = 1,05
- Ferestre / uși în stare bună, dar neatenție p₃ = 1,02
- Cel puțin jumătate dintre armăturile de reglaj ale corpuri statice nu sunt funcționale p₄ = 1,05
- Instalația de încălzire a fost spălată / curățată cu mai mult de trei ani în urmă p₅ = 1,05
- Coloanele de încălzire nu sunt prevăzute cu armături se separă și golire a acestora p₆ = 1,03
- Tencuiala exterioră căzuță parțial p₇ = 1,05
- Peretii exteriori prezintă pete de condens p₈ = 1,02
- Cladire fără sistem de ventilare organizată p₉ = 1,02
- Cladire fără sistem de ventilare organizată p₁₀ = 1,10

□ Recomandări pentru reducerea costurilor prin îmbunătățirea performanței energetice a clădirii:

- Soluții recomandate pentru anvelopa clădirii,
- Soluții recomandate pentru instalațiile aferente clădirii, după caz

Clasificarea energetică a clădirii este făcută funcție de consumul total de energie al clădirii, estimat prin analiză termică și energetică a construcției și instalațiilor aferente.

Notarea energetică a clădirii ține seama de penalizările datorate utilizării nerationale a energiei.

Perioada de valabilitate a prezentului Certificat Energetic este de 10 ani de la data înregistrării acestuia

comparatie: eficienta energetica a vitrajelor

Ipoteze:

Energie radiata de Soare, ponderata cu numarul de ore insorite si vitraj vertical: 750W/mp

Suprafata vitrata: 100 m² de sticla (ferestre sau perete cortina).

5 persoane in incapere, 5 calculatoare

Cost 1KWh=0,67 RON

Durata functionare aparate de aer conditionat 30 zile* 6 ore/zi= 180 ore

Aparat Samsung, 4Way Cassette S NS1004DXEA / RC100DHXGA, 34000 btu/h cu consum foarte eficient, **clasa A+** :

Putere consumata la racire (kw/h)= 4.7

varianta 1: sticla clara si lowE

SF= 0.64 => insolatie de 480 W/mp

capacitate necesara: 265128 BTU/h

=> necesar 8 aparate

cost consum curent electric lunar =

$4.7 \times 6 \times 30 \times 0,67 \times 8 =$

4535RON= 1037 Euro !!

varianta 2: Planibel grey

SF= 0.32 => insolatie de 240 W/mp

capacitate necesara: 178173 BTU/h

=> necesar 5 aparate

cost consum curent electric lunar =

$4.7 \times 6 \times 30 \times 0,67 \times 5 =$

2834RON= 648 Euro !!

Diferenta LUNARA de consum este de 1701 RON= 389 Euro!!

suprafata vitrata doar 100 mp

Economie de bani

Cu cat SF este mai mic, cu atat e mai bine, pentru ca va scadea :

- consumul pentru racire (aer conditionat) – **389 Euro. lunar**
- costul efectiv al instalatiei de aer conditionat- **8 aparate sau 5 aparate?**

Nu uitati insa de transmisia luminii (de selectivitate) , altfel e mai simplu sa ziditi ferestrele si SF= 0.

O sticla selectiva cu factor solar scazut se poate amortiza ca si investitie dupa cateva luni de functionare!!

Concluzia? Cautati factor solar scazut, in special pe fatadele INSORITE.
